Batch 1276 — failed source URLs vs recovered content (12 completed companies)

> ***Status (added 2026-10-12): batch 1276 is a failed/degraded run.*** *It ended with* ***49 failed source URLs never recovered*** *(12.5% of the attempted corpus), including* ***10 of Southern's 27****. Its 12 "completed" companies were scored on a corpus with these gaps. They must* ***not*** *be treated as confirmed-comprehensive results, and their scores should not be used as the reference for coverage or quality comparisons. A complete set of 36 score rows per company does not change this (see "What it does NOT show" below).*

Generated read-only: `documents` rows (SELECT in a `readonly` transaction) for the 12 completed company ids, joined by URL to the saved worker logs `/tmp/wklogs_{w1,w2,cf79e5a7,w4}.json` (merged, de-duplicated on (timestamp,message), clipped to the batch window 01:24:46–02:18:04 UTC). Scripts: `recon_db2.py` (DB snapshot), `recon_analyze.py` (join). No writes.

Definitions: **failed URL (log)** = URL with ≥1 browser-launch failure / browser-unavailable / fetch-timeout / HTTP-failure line in the window. **Recovered via fallback** = a failed URL that also has a Firecrawl, deferred-retry or browser-PDF recovery line. **ok in DB w/o logged recovery** = failed in logs, `fetch_status='ok'` with content now (recovered by a path that does not log a recovery line, e.g. later strategy in the same fetch chain). **Remaining gap** = failed URL with no recovery and not ok in DB. **dead (DB)** = `fetch_status='dead'` rows created/fetched in the batch window. `ok` = rows with `fetch_status='ok'` — equals the corpus counts in deliverable 36 for every company.

Company (id)	doc rows	ok (corpus)	dead (DB)	dead, first-party & not gate-rejected	failed URLs (log)	of which browser launch/unavailable	recovered via fallback (by)	ok in DB w/o logged recovery	remaining gap (URLs)

Per-company reconciliation: failed → recovered → residual gap

Arithmetic per row: **failed URLs (log) = recovered via logged fallback + ok in DB without a logged recovery + residual gap.** Re-run on 2026-10-12 from the saved inputs (`recon_analyze.py` over `/tmp/recon_docs.json` + saved worker logs; 12,134 log lines in the window, 5 browser-launch lines not attributable to a company URL). The output matched the table above exactly.

Company (id)	failed URLs	recovered via fall-back	ok in DB, no logged recovery	residual gap	of which issuer-do-main (first-party)	gap share of at-tempted corpus = gap / (ok + gap)
CSX (9)	8	5	1	**2**	2	2 / 29 (6.9%)
MAGNA (10)	1	0	0	**1**	0	1 / 54 (1.9%)
Southern (11)	11	1	0	**10**	9	10 / 27 (37.0%)
DARDEN (14)	11	4	4	**3**	2 (both gate- `re-jected` an-nual re-ports, not fetch losses)	3 / 37 (8.1%)
BCE (15)	9	4	1	**4**	4 (incl. 2025 in-tegrated + financial annual re-ports)	4 / 33 (12.1%)
CELESTICA (19)	14	5	7	**2**	2	2 / 43 (4.7%)
Dominion (20)	3	2	0	**1**	1	1 / 25 (4.0%)
Power As-sets (21)	4	0	0	**4**	4 (sustain-ability re-ports + an-nual res-ults)	4 / 38 (10.5%)
AXA (24)	6	0	1	**5**	3 (incl. 2024 in-tegrated report)	5 / 27 (18.5%)

Company (id)	failed URLs	recovered via fall-back	ok in DB, no logged recovery	residual gap	of which issuer-do-main (first-party)	gap share of at-tempted corpus = gap / (ok + gap)
OTSUKA (25)	4	1	0	**3**	2	3 / 14 (21.4%)
Idemitsu (29)	11	0	4	**7**	4 (sustain-ability databook PDFs)	7 / 33 (21.2%)
BARRATT (30)	13	4	2	**7**	6 (incl. 2022/2023 /2026 an-nual re-ports)	7 / 33 (21.2%)
Total	**95**	**26**	**20**	**49**	**39**	49 / 393 (12.5%)

How to read this table: what it does NOT show

- **Fallback recovery does not mean full coverage.** 26 of the 95 failed URLs (27%) were re-covered by a logged fallback (Firecrawl, deferred retry or browser-PDF). Another 20 ended `ok` in the DB through a path that logs no recovery line. **49 URLs (52%) were never recovered**, and 39 of those are on the issuer's own domains. Several are core disclosures (BCE 2025 annual re-ports, AXA 2024 integrated report, Barratt annual reports, Power Assets sustainability reports, Idemitsu databook).
- **36 score rows per company does not mean coverage.** Every company has exactly 36 `meas-ure_scores` rows for batch 1276 (36 distinct measures). The pipeline writes one row per measure whatever evidence it had, so a complete score set says nothing about missing source documents. Scores for these 12 companies were produced on a corpus with the residual gaps listed here.
- **A recovered URL may hold less content than the browser would have produced.** Firecrawl or deferred-retry text for a PDF/viewer URL can be partial. This analysis checks that content exists (`content_length > 0`), not that it is equivalent.
- **Attribution is heuristic.** Failures and recoveries are matched to companies by URL; truncated URLs in logs are matched by prefix if longer than 40 characters. URLs that failed without any matching log line are not counted as "failed" here. They appear only in the `dead` list below: 57 dead rows in total, which overlap with but are not the same set as the 49 residual-gap URLs.
- **Southern (37% gap) is the clearest coverage loss.** All 11 of its failed URLs hit browser launch failures. The residual gap is the likely mechanism by which the browser-lifetime defect (fixed on `fix/browser-lifetime-and-stop-rule`) reduced corpus quality even for jobs that "completed". This is an inference from the log tags, not a measured causal link.

- **Consequence for using batch 1276.** Because of the 49 unrecovered URLs (Southern 10/27), batch 1276 is classified as a **failed/degraded run**. None of its completed companies, Southern least of all, counts as confirmed-comprehensive.

Remaining-gap URLs per company (failed in batch window, no recovery, not ok in DB)
